# MORTALITY FROM SMOKING IN DEVELOPED COUNTRIES 1950-2000 

(2nd edition, revised June 2006:
www.deathsfromsmoking.net)
Richard Peto, Alan D Lopez, Jillian Boreham and Michael Thun

## Main tables and population risks: smoking-attributed \& total deaths

One pair of pages for each of the following:

| All Developed Countries | Czech Republic | Lithuania | Serbia \& Montenegro |
| :--- | :--- | :--- | :--- |
| EU15 $^{\star}$ (European Union) | Denmark | Luxembourg | Slovakia |
| EU10 |  |  |  |
| EU25 (European Union) | Estonia | Macedonia (FYR) | Slovenia |
| EU25 (European Union) | Finland | Malta | Spain |
| Australia | France | Moldova | Sweden |
| Austria | Germany | Netherlands | Switzerland |
| Belarus | Greece | New Zealand | Ukraine |
| Belgium | Hungary | Norway | United Kingdom |
| Bulgaria | Ireland | Poland | United States |
| Canada | Italy | Portugal |  |
| Central Asia | Japan | Romania |  |
| Croatia | Latvia | Russian Federation |  |

[^0]ALL DEVELOPED COUNTRIES: 2000

Relative importance of deaths in MIDDLE age (35-69) in the year 2000

| Age <br> range <br> (years) | Deaths attributed to SMOKING <br> /total deaths (millions) <br> Male | Mean years lost <br> Female | (2R DEATH FROM <br> SMOKING |
| :--- | :---: | :---: | :---: |
| $0-34$ | $-/ 0.4$ | $-/ 0.2$ | - |
| $35-69$ | $0.8 / 2.7$ | $0.2 / 1.4$ | 22 years |
| $70+$ | $0.6 / 3.3$ | $0.3 / 4.6$ | 8 years |
| All ages | $1.4 / 6.5$ | $0.5 / 6.2$ | 15 years |

Deaths, by cause, attributed to SMOKING / total deaths (thousands) in the year 2000

| Cause | Male (by age) |  |  |  | Female (by age) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0-34 | 35-69 | 70+ | All | 0-34 | 35-69 | 70+ | All |
| Lung Cancer | -/0.8 | 199/217 | 176/196 | 375/413 | -/0.5 | 48/70 | 67/92 | 115/162 |
| All Cancer | -/21 | $\begin{gathered} 310 / 709 \\ (44 \%) \end{gathered}$ | $\begin{gathered} 262 / 756 \\ (35 \%) \end{gathered}$ | 571/1485 | -/19 | $\begin{aligned} & 60 / 487 \\ & (12 \%) \end{aligned}$ | $\begin{aligned} & 88 / 686 \\ & (13 \%) \end{aligned}$ | 147/1192 |
| Vascular | -/28 | 303/995 | 177/1600 | 479/2623 | -/13 | 47/503 | 121/2624 | 168/3140 |
| Respiratory | -/25 | 82/154 | 146/377 | 229/556 | -/18 | 23/67 | 92/373 | 115/459 |
| All Other | -/351 | 111/847 | 50/589 | 160/1787 | -/140 | 26/347 | 48/935 | 74/1423 |

|  |  |  | $(9 \%)$ |

Population risk of dying at ages 0-34

MALE

Population risk of a 35-year-old dying at ages 35-69 from smoking (shaded) or from any cause (shaded and white)
*eg, at year 2000 male death rates, out of 100 men aged 35,53 would die before age 70 (with 12 of these deaths attributed to smoking)

Note: Most of those killed by smoking would otherwise have survived beyond age 70, but a minority (shaded area to right of dotted line) would have died by 70 anyway

Note: These 8 Central Asian countries are those in which the mortality rates in recent years are thought to need correction for under-registration of deaths: Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan.

If the substantial decrease during the 1990s in the mortality attributed to cancer in these 8 countries is partly artefactual, then the corresponding decrease in the mortality attributed to smoking (pages 124-131) will not be reliable.

Population risk of dying at ages 0-34

MALE

Population risk of a 35-year-old dying at ages 35-69 from smoking (shaded) or from any cause (shaded and white)
*eg, at year 2000 male death rates, out of 100 men aged 35,27 would die before age 70 (with 8 of these deaths attributed to smoking)

Note: Most of those killed by smoking would otherwise have survived beyond age 70, but a minority (shaded area to right of dotted line) would have died by 70 anyway

## FEMALE
